

Since 1995, Fat Cat Snappy Snares wires have been engineered for high performance, superior sound and long life. Now made of 90% carbon steel wire, attached to stainless steel end plates for the finest quality.

- **24 Strand Dual Tension Snappy Snares**
 - 12-Throw Off Adjustable = TIGHT SOUND**
 - 12-Tension Reducible = SENSITIVE SOUND**
- **Fully Active at Any Volume**
- **Eliminates The Need For Two Throw Offs**
- **Fits All Standard Throw Off Snare Drums**
- **Attaches Easily With Cord or Strap**
- **Adjusts Easily With A Screw Driver**

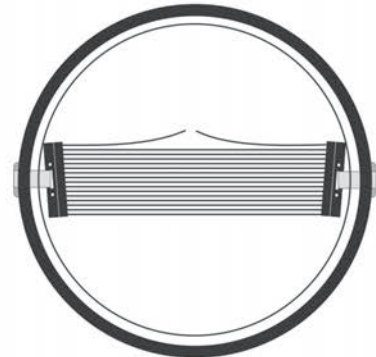

Installation:

Make sure the FAT CAT adjustment assembly is completely closed so all snare wires are at the same tension. Always start by attaching to the butt side first using strap or cord. Keeping the snare wires evenly centered, equal distance from each side of the drum (when fully tensioned.) Make sure that the end plates are parallel with each other and not twisting, so as to not tension one side of the wires more than the other. This is very critical and will insure the highest performance and longest life. Adjust your snare drum throw off for the desired tight sound first. Then, unscrew (counterclockwise) the FAT CAT adjustment assembly 1 or more complete turns for the desired loose sound. See below.

NO

Warranty

Snare wires will fatigue over time because of constant vibration. Fat Cat Snappy Snares have a 60 day limited warranty against manufacturers defects from the date of purchase. Failure to properly install with even and balanced tension or excessive tension, will void the warranty and may cause pre-mature breakage. For more information, go to:
